SeaVint

VERSION 2.0
NOVEMBER 2026

USER GUIDE

SeaVint PDF & SeaVint Transfer

How to move files between a Mac, a PC and a phone, and how to edit, sign and convert PDFs. Every step comes with an annotated screenshot of where to click.

SeaVint PDF

PDF editor and converter: edit text in the document's own font, sign, fill forms, manage pages, OCR scans, 20 output formats.

SeaVint Transfer

Files of any size between a Mac, a PC and a phone over Wi-Fi or a cable. No internet, no cloud.

Contents

Two parts: first moving files, then working with PDFs. The numbered markers on each screenshot match the numbered notes next to it.

What you get

`SeaVint-Transfer.exe`

SeaVint Transfer

Runs on a Windows 10/11 PC. Macs, other PCs and phones connect from a browser.

`SeaVint-PDF.exe`

SeaVint PDF for Windows

Windows 10/11. Saves straight into the open file and adds itself to Explorer menus.

`SeaVint-PDF.html`

SeaVint PDF for Mac

Opens in a browser on a Mac or any computer, offline. Chrome works best.

To put the programs on another computer, just copy the file — on a USB stick, by email or with SeaVint Transfer.

How to read the screenshots

1

Number

A marker on the screenshot. The note with the same number is right beside it.

Outline

The button or field to click.

`Ctrl+S`

Keys

A keyboard shortcut. On a Mac use Cmd instead of Ctrl.

PART 1

SeaVint Transfer

Send files of any size between a Mac, Windows PCs and phones on the same network. The program runs on one Windows PC, and every other device connects to it from an ordinary web browser.

Nothing to install
The Mac and phone only need Safari or Chrome.

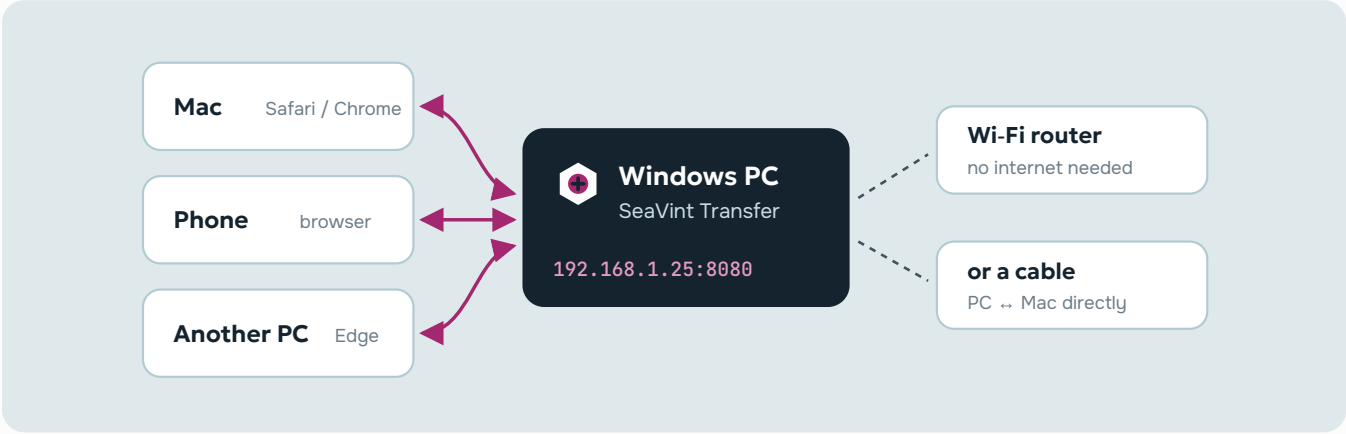

Any size
Videos of tens of gigabytes, whole folders. If the link drops, it resumes where it stopped.

Both ways
Mac to PC and PC to Mac, phone or another PC.

HOW IT WORKS

01 One PC is the meeting point

SeaVint Transfer runs on a Windows PC. Other devices open its address in a browser, enter the PIN and exchange files in both directions.

First launch on Windows

1. **Run SeaVint-Transfer.exe**
   Double-click it. Nothing to install.

2. **If Windows shows a warning**
   In “Windows protected your PC”, click **More info** → **Run anyway**. Only the first time.

3. **Allow network access**
   If the firewall asks, click **Allow access**.

4. **Two windows open**
   The program's black console window and a page in the browser. Keep the black window open: closing it stops the program.

The console window

```
SeaVint Transfer 2.0 — file transfer with your Mac

On the Mac, open Safari or Chrome and type this address:

   http://192.168.1.25:8080      Wi-Fi, Wi-Fi / shared network

PIN:  482 915

Files from the Mac are saved to:
   C:\Users\Alex\Downloads\SeaVint Transfer

To send files to the Mac, drag them into the SeaVint Transfer window
in the browser, or put them into the “To Mac” folder.

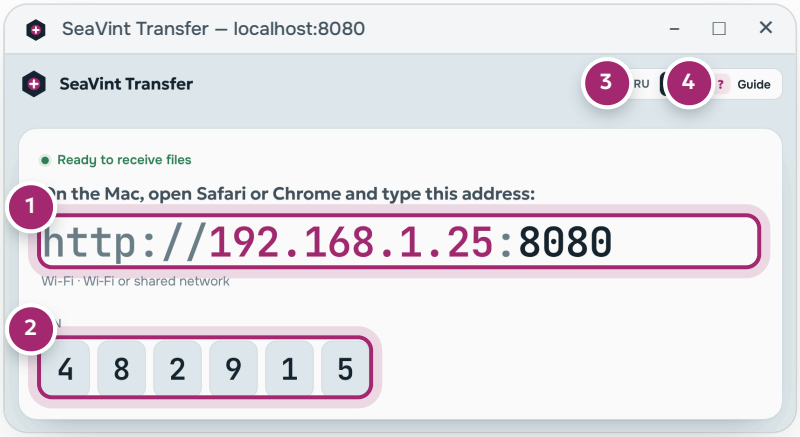

Keep this window open while files are transferring.
Closing it shuts the program down.
```

It shows the same address, PIN and folder as the browser page.

THE PC WINDOW

02 What SeaVint Transfer shows on the PC

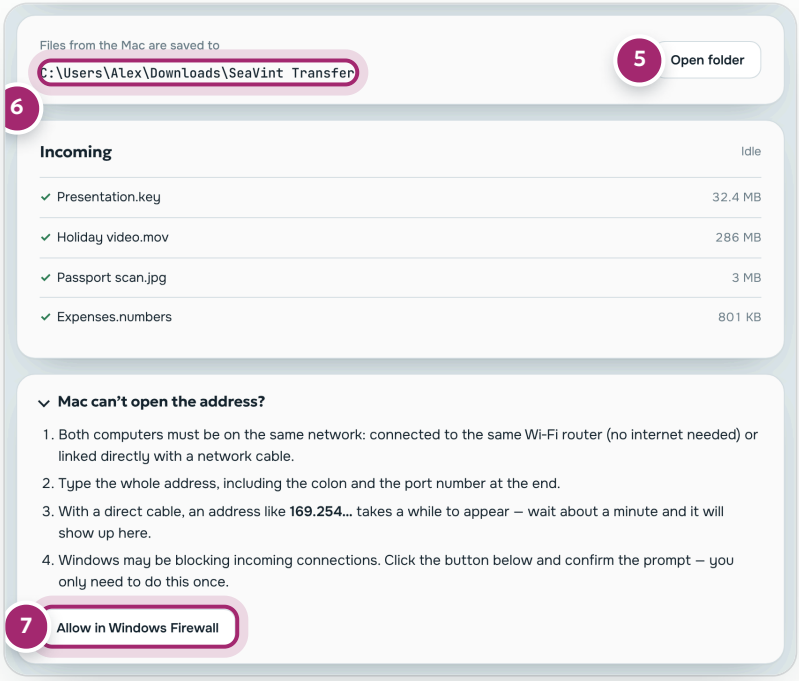

This page opens by itself at launch. You can close it: the program keeps running while the black window is open.

1. **Address**
   Type it on the Mac, phone or other PC — in full, with `:8080` at the end.
2. **PIN**
   The digits shown on the PC. The PIN never changes: each device asks for it once and remembers it.
3. **Language**
   Switches between Russian and English. The choice is remembered.
4. **Guide**
   A step-by-step walkthrough inside the program. See section 06.

Further down the same page

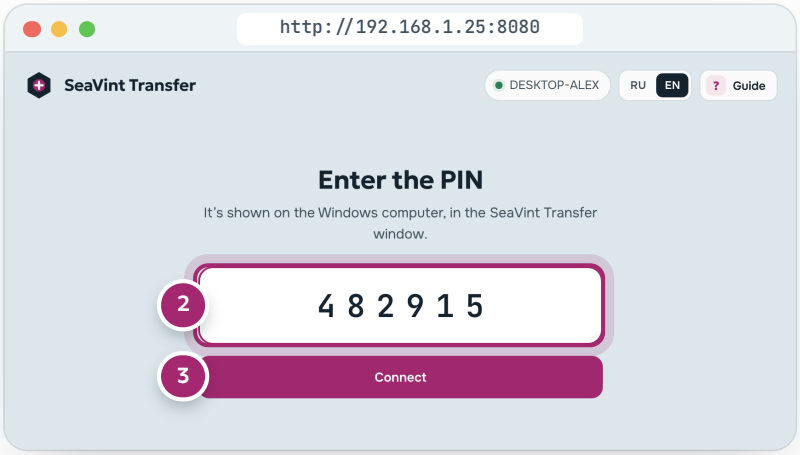

5. **Where files are saved**
   `Downloads\SeaVint Transfer`. The button opens that folder.
6. **Incoming**
   What is arriving right now and what has arrived, with speed.
7. **If the Mac can't open the address**
   Hints plus a button that allows the program in Windows Firewall for you.

MAC TO PC

03 Send files from the Mac to the PC

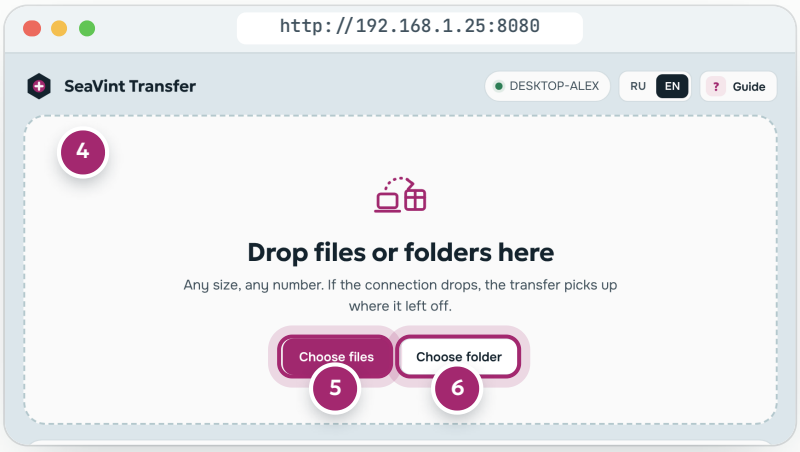

Nothing is installed on the Mac — everything happens in Safari or Chrome.

1. **Open the address**
   In Safari or Chrome on the Mac, type the address from the PC screen, e.g. `http://192.168.1.25:8080`.
2. **Enter the PIN**
   The digits shown on the PC.
3. **Click Connect**
   This Mac won't be asked again.

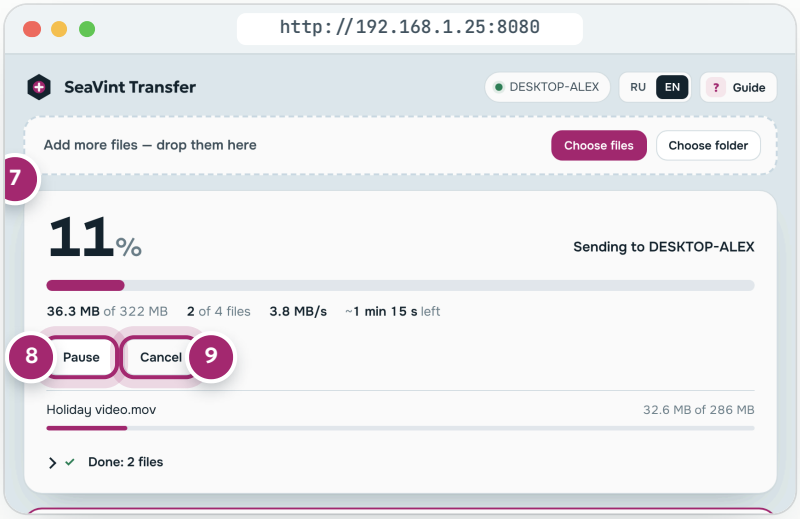

> ⓘ Bookmark the page so you don't have to type the address next time.

Drop the files

4. **Drop area**
   Drag files or whole folders here from Finder — any size, any number.
5. **Choose files**
   If you'd rather pick them in a dialog.
6. **Choose folder**
   The folder arrives on the PC with the same structure.

Wait for 100%

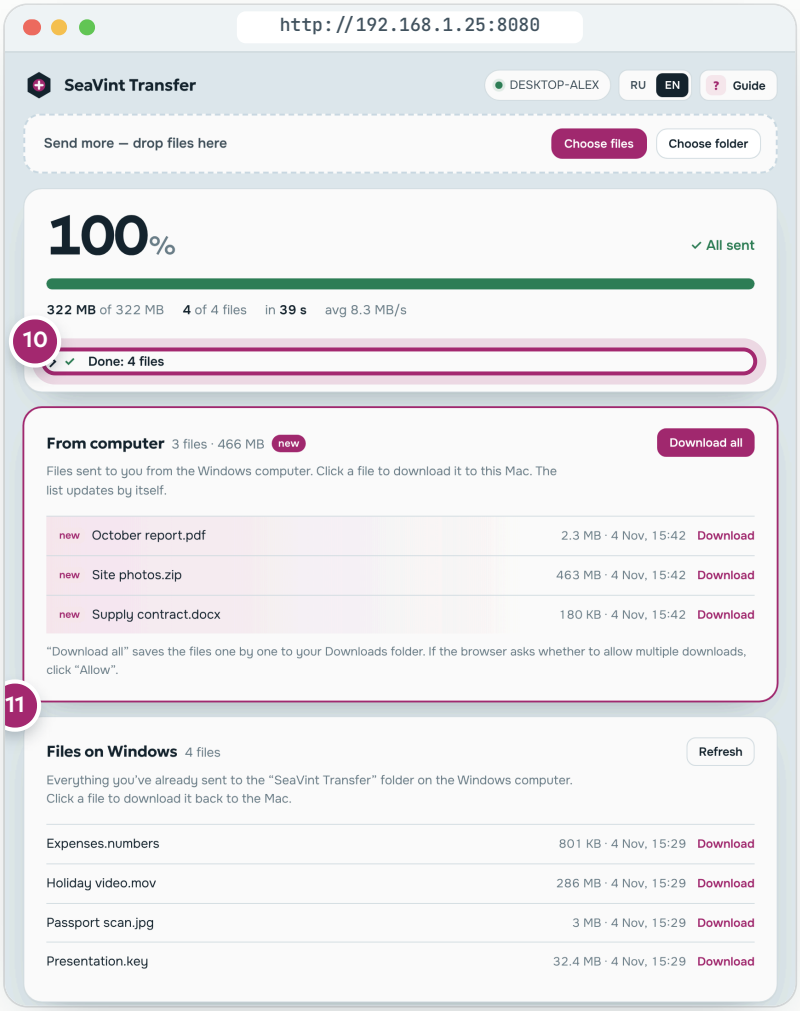

7 Progress
Percent, speed and time left.

8 Pause
Stop now, continue later.

9 Cancel
Abort the transfer.

If the connection drops or the Mac sleeps, open the page again and drop the same files. What has already arrived won't be sent again.

Where the files land on the PC

10 Done
The files are on the PC in `Downloads\SeaVint Transfer`.

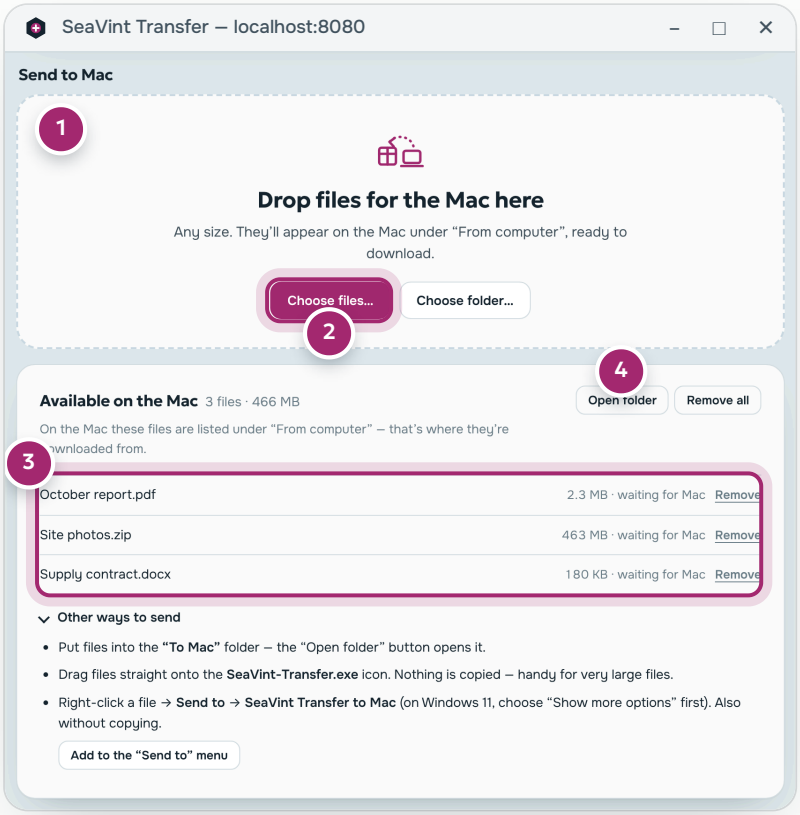

11 Files on Windows
Everything already on the PC. Click a file to download it back to the Mac.

PC TO MAC

04 Send files from the PC to the Mac

You put the files out on the PC and the Mac picks them up in “From computer”.

On the PC

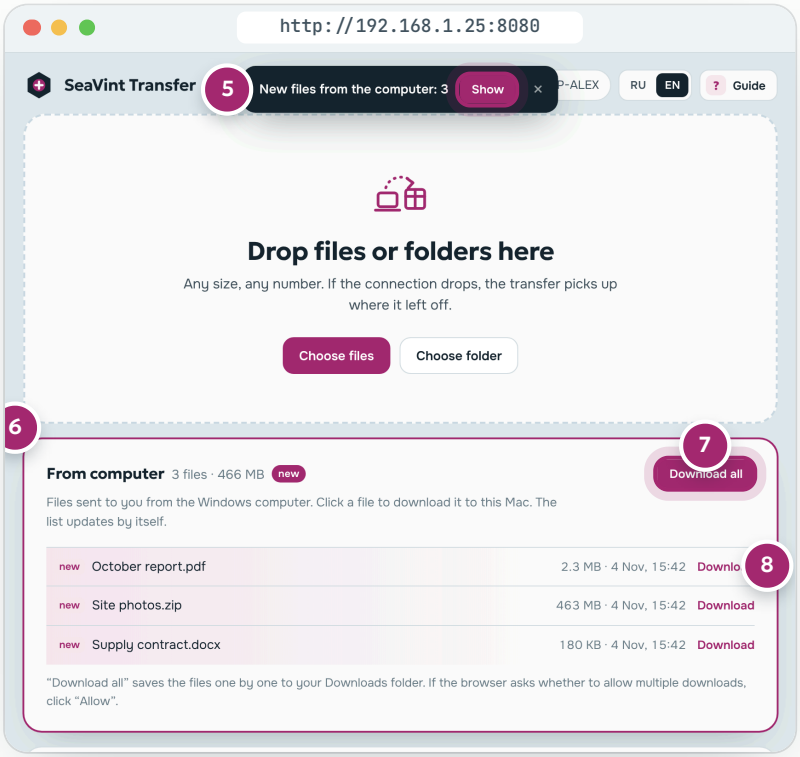

1 Send to Mac
Drag files or folders into this area on the PC.

2 Or pick them
File and folder pickers.

3 Available on the Mac
What you've put out. Shows whether the Mac has downloaded each file. “Remove” takes it off the list.

4 Open folder
Opens the outgoing folder — you can simply copy files into it too.

On the Mac

5 Notification
Within seconds a banner announces the new files — click “Show”.

6 From computer
Files that were put out on the PC.

7 Download all
Downloads everything to Downloads. If the browser asks about multiple downloads, allow it. 16+ files arrive as one archive.

8 Download
Download a single file.

Three more ways to put files out on the PC

The “To Mac” folder

Copy files into `Downloads\SeaVint Transfer\To Mac`. They appear on the Mac right away.

Onto the program icon

Drag files straight onto SeaVint-Transfer.exe. Nothing is copied — handy for very large files.

The “Send to” menu

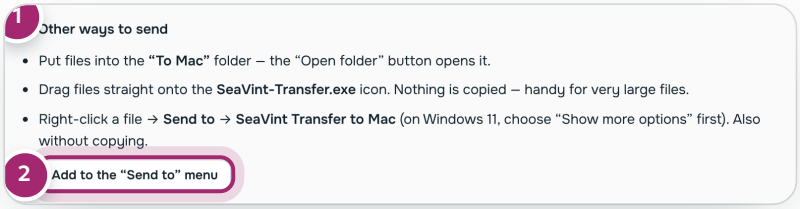

Click the button under “Other ways” once. Then right-click any file → **Send to** → **SeaVint Transfer to Mac**.

1 Other ways to send

A collapsible block under the file list.

2 Add to the “Send to” menu

Creates an entry in the Windows Explorer menu. On Windows 11 it's under “Show more options” (or Shift + right-click).

Cheat sheet

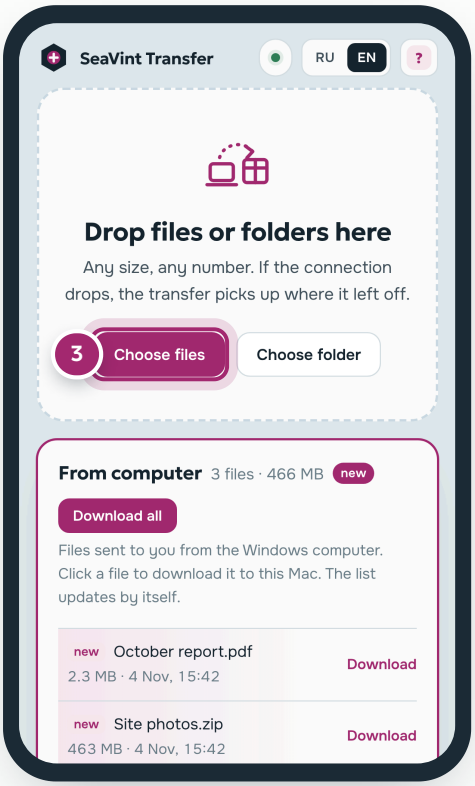

Mac → PC	1 On the Mac: address in Safari `192.168.1.25:8080`	→ 2 PIN from the PC screen `482 915`	→ 3 Drop files into the window	→ On the PC: `Downloads\SeaVint Transfer`
PC → Mac	1 On the PC: into “Send to Mac”	→ 2 On the Mac: “From computer”	→ 3 Download all	→ On the Mac: `Downloads`

ⓘ The Mac can pick files up as long as the program's black window is open on the PC. The browser tab on the PC can be closed.

PC ↔ PC AND PHONES

05 Same steps on any device

Buttons say “Mac”, but they work with any computer or phone: the device opens the address in a browser and enters the PIN.

From a phone (iPhone or Android)

1. **Same Wi-Fi**
   The phone is on the same network as the PC.
2. **Address and PIN**
   In Safari or Chrome, enter the address from the PC and the PIN.
3. **Choose files**
   You can pick photos and videos from the gallery. The other way: the “From computer” section.

From one PC to another

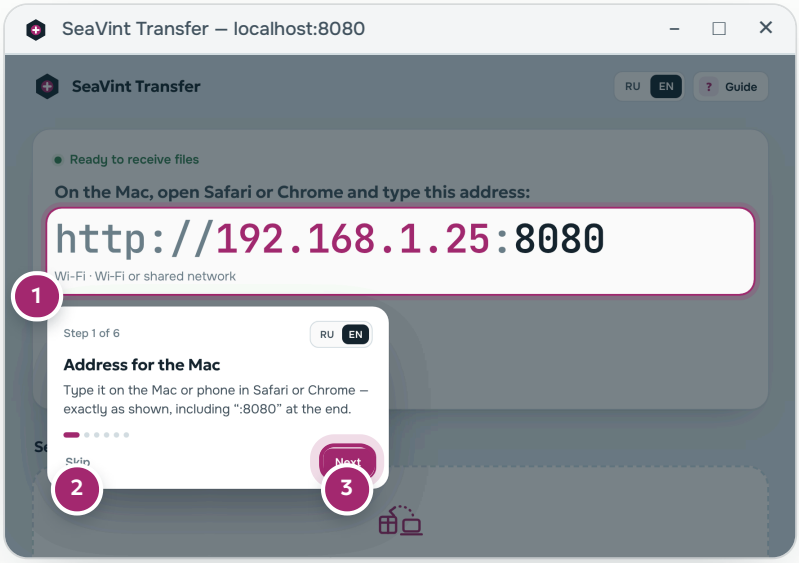

1. **Main PC**
   Run the program on one PC — ideally the one receiving more files.
2. **Second PC**
   Open the main PC's address in Edge or Chrome and enter the PIN. Nothing to install.
3. **Exchange**
   Second → main: drop files into the browser window. Main → second: use “Send to Mac”.

⚠ Two Macs can't connect to each other directly — a Windows PC must be in the middle. Between Macs, AirDrop is simpler.

GUIDE AND LANGUAGE

06 The program shows you what to do

The first time you open it — on the PC and on each device — a short on-screen tour starts. You can skip it and reopen it any time.

1 On-screen hint
Highlights the real button or field and explains what to do with it.

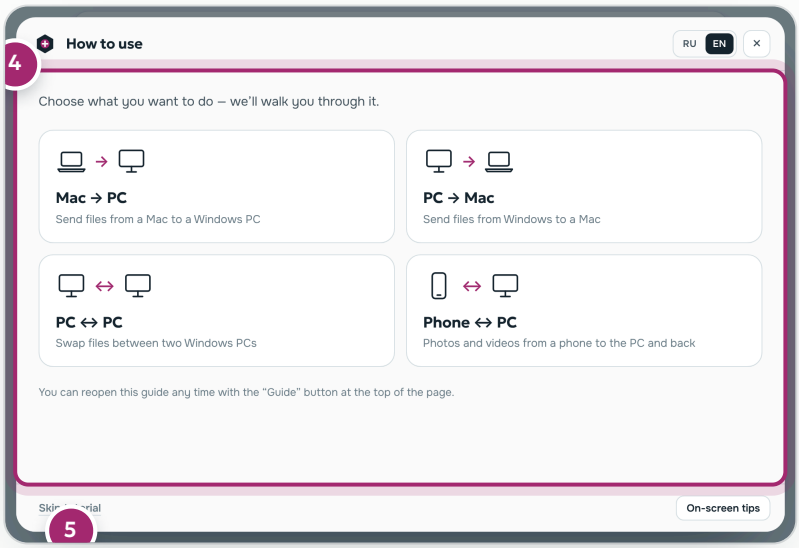

2 Skip
Closes the tour. To see it again: "Guide" → "Show on-screen tips again".

3 Next
Next step. Arrow keys work too; Esc skips.

Full walkthrough by scenario

4 Choose a scenario
Mac → PC, PC → Mac, PC ↔ PC or Phone ↔ PC. Then illustrated steps that already show your own address and PIN.

5 Skip tutorial
Leave at any step.

ⓘ Switch the language in the top-right corner (RU / EN) — on the PC and on each device separately.

TROUBLESHOOTING

07 SeaVint Transfer FAQ

There's no file size limit. Almost every problem is the network, not the program.

PROBLEM	WHAT TO DO
The address won't open	Are both devices on the same network? Is the address typed in full, with `:8080`? On the PC, click “Allow in Windows Firewall” and confirm.
Still won't open	Turn off VPN on both devices. Guest and office Wi-Fi often isolate devices — connect the PC and Mac with a cable or use another router.
Cable plugged in, no address	Wait about a minute: an address like `http://169.254…:8080` marked “direct cable” appears.
Windows blocks the program	“More info → Run anyway”. If that button is missing, company policy blocks it — ask your administrator.
Transfer interrupted	Open the page again and drop the same files — it resumes. Don't let the Mac or PC sleep during large transfers.
The program stopped	The black window was closed. Run SeaVint-Transfer.exe again — the address and PIN stay the same.
Where are the files on the PC	`Downloads\SeaVint Transfer` — the “Open folder” button on the program page.
A new Mac or phone	Open the same address and enter the same PIN. Each device remembers the PIN on its own.

PART 2

SeaVint PDF

An Acrobat-class PDF editor and converter. Works offline: files never leave your computer, and everything — even text recognition — runs locally.

Edit like Word
Text uses the document's own font; table lines stay intact.

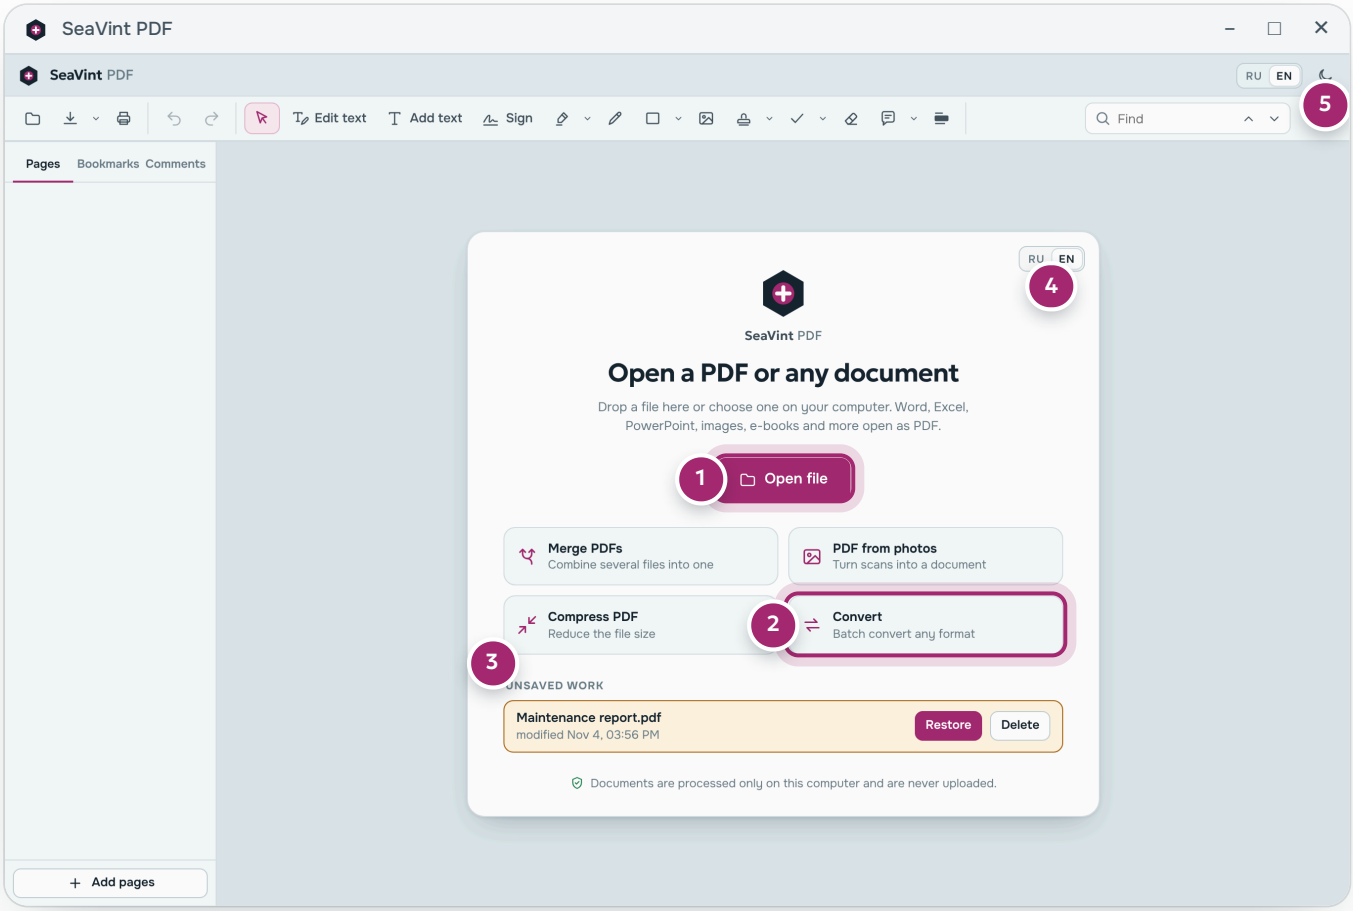

Signatures & forms
Draw, type or photograph your signature. Fill in fields.

20 formats
Word, Excel, PowerPoint, images, PDF/A — both ways.

GETTING STARTED

08 Launch and the start screen

On Windows run SeaVint-PDF.exe; on a Mac or any computer open SeaVint-PDF.html in a browser (Chrome is best). Nothing to install.

1 Open file
A PDF or any document: Word, Excel, an image… Or just drag the file into the window.

2 Convert
Many files at once — to PDF and back.

3 Recent and unsaved
If you closed without saving, “Restore” appears here.

4 Language
Russian or English, switches instantly.

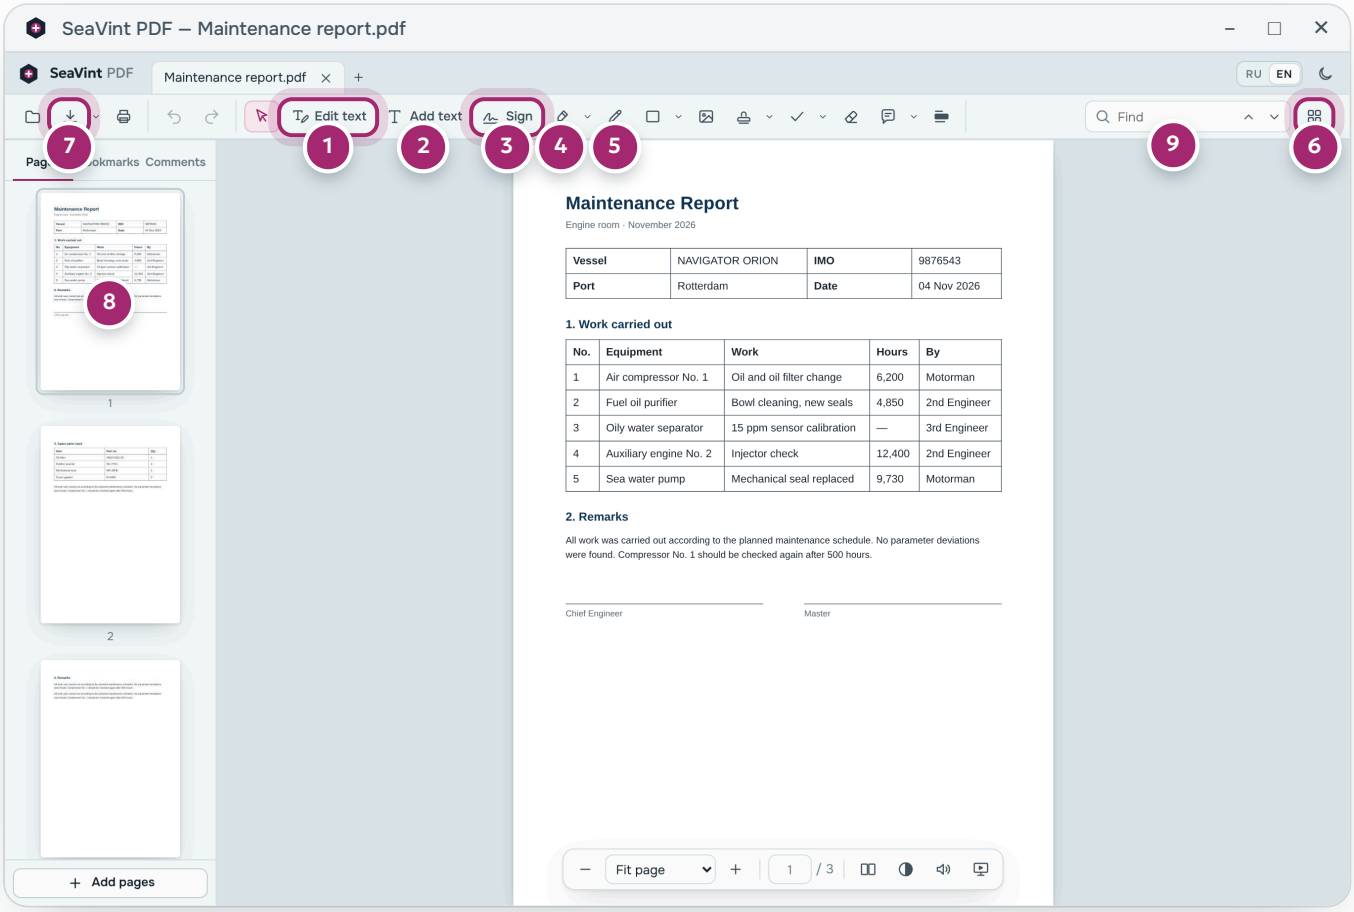

5 Theme
Light or dark.

ⓘ On Windows, SeaVint PDF is added to “Open with”. To open every PDF with it: right-click a PDF → **Open with** → **Choose another app** → **SeaVint PDF** → **Always**.

MAIN WINDOW

09 Where everything is

Hover over any icon to see its name and shortcut.

1 Edit text
Change the document's own text (E).

2 Add text
Type anywhere on the page (T).

3 Sign
Place your signature.

4 Highlight
Highlight, underline, strike out (H).

5 Drawing and shapes
Pen (D), boxes, arrows, notes, stamps.

6 All tools
Compress, password, OCR, pages, convert.

7 Save
Ctrl+S. The arrow next to it — other formats.

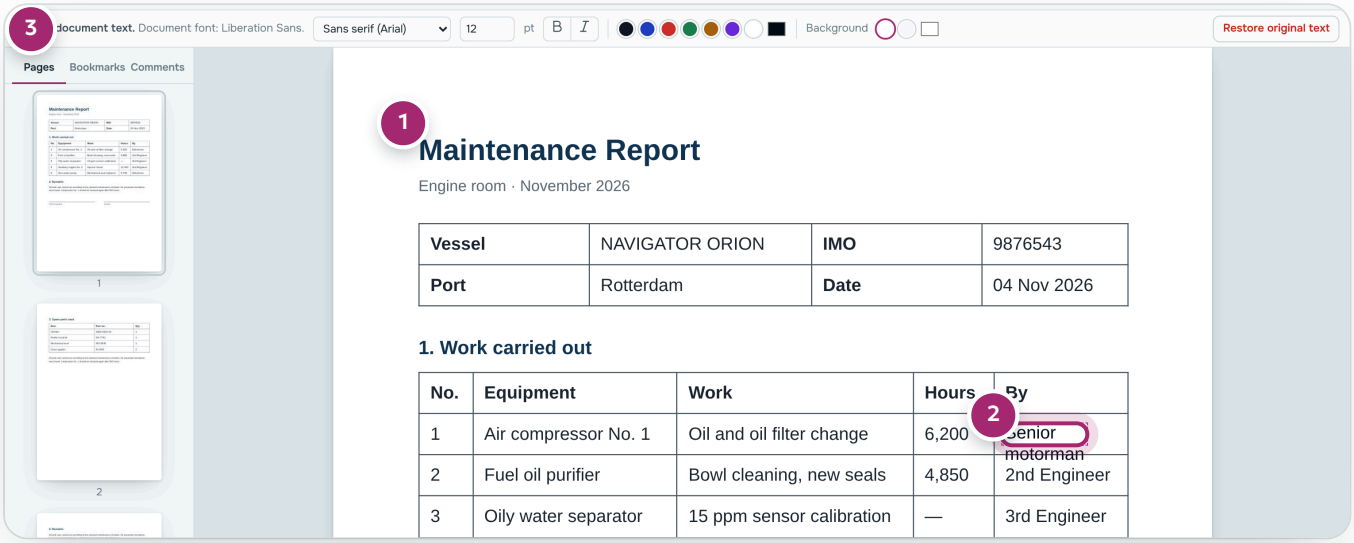

8 Page thumbnails
Reorder, rotate, delete pages.

9 Search
Ctrl+F — search the document.

EDITING TEXT

10 Fix the text right in the PDF

New text uses the same font, size and colour as the document. Table lines stay intact and text wraps inside its cell.

1 Turn it on
Click **Edit text** or press `E`. Paragraphs and cells get outlined.

2 Click and type
Edit as in Word: delete, add, break lines.

3 Done
Press `Esc` or click outside.

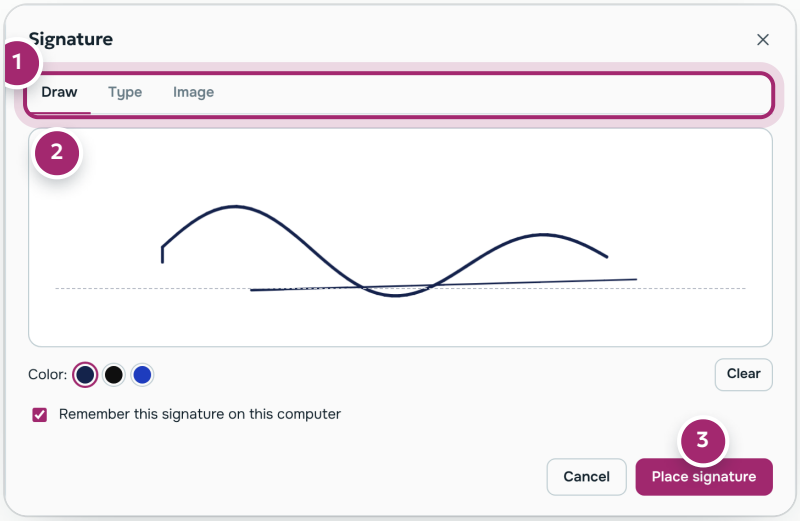

3 Bar above the text
Font, size, colour.
Document font
restores the original font,
Restore original text
undoes the edit.

ⓘ If a letter is missing from the document's font, a similar font is used. Scans need text recognition first (section 12).

SIGNING AND MARKUP

11 Sign, mark up, fill in

Everything you add can be moved, resized and deleted (Delete). Undo with Ctrl+Z.

1. **How to sign**
   Draw, Type or Image. A Saved tab appears after your first signature.
2. **Signature pad**
   Sign with a mouse, finger or pen.
3. **Place it**
   Then click where it goes on the page. It's remembered on this computer.

Other markup tools

Add text `T`	Click on the page and type.
Highlight `H`	Drag across text. Choose the style in the arrow next to it.
Form fields	Just click a field and type.
Checkmark, cross, date	Pick a mark and click where it goes.
Stamp	Ready-made stamps in the arrow menu.
Add image	Pick a file, then move and resize.
Rectangle `R`	Oval, line, arrow — in the arrow menu.
Sticky note `N`	A margin comment; all notes are listed in the side panel.
Whiteout	Draw a box to cover it with white.
Redact	A black box: the text under it is removed from the file for good.

PAGES AND TOOLS

12 Working with pages

Thumbnails of every page sit on the left. Everything you do with pages starts there.

1. **Page order**
   Drag a thumbnail up or down.
2. **Hover buttons**
   Rotate left or right, duplicate, delete. Hold Ctrl or Shift to select several pages.
3. **Add pages**
   Insert pages from another PDF or an image.

> Merge, split, extract pages, insert a blank page or crop margins — in the All tools panel (next page).

> The Bookmarks and Notes tabs above the thumbnails show the outline and every comment.

All tools

The grid button in the top-right corner opens a panel with everything that didn't fit on the toolbar.

4 File
Compress PDF, add or remove a password, document properties.

5 Text
Recognize text in scans and photos, find and replace, redact by search, compare with another version.

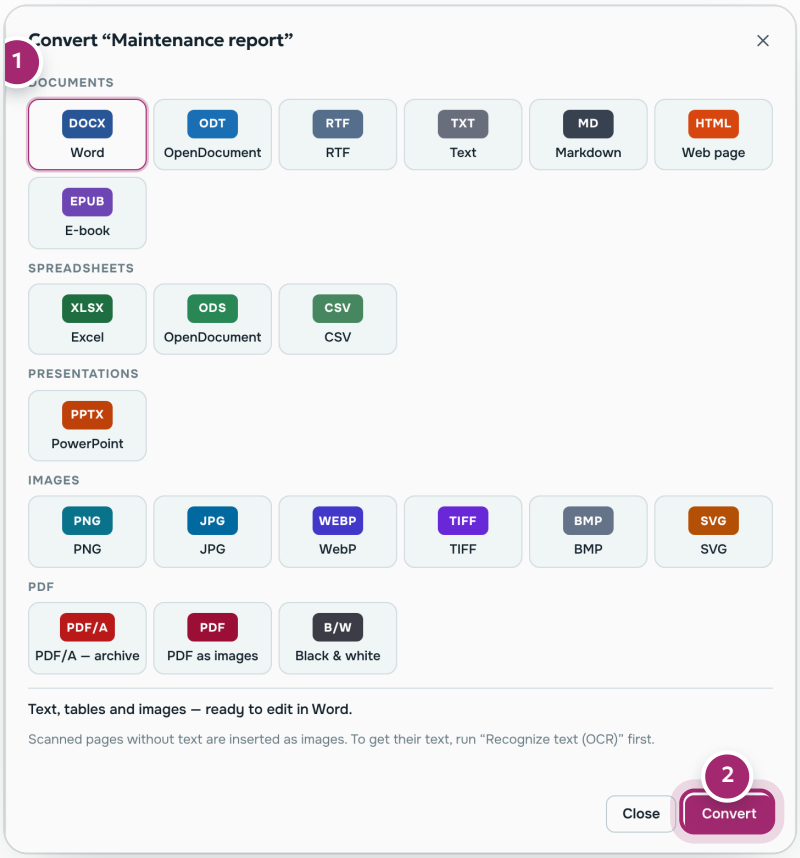

6 Pages
Merge, split, extract pages, blank page, crop and straighten.

7 Page design
Watermark, headers and page numbers, bookmarks. Further down: conversion (section 13).

CONVERTING

13 Any format to PDF and back

Any file you open in SeaVint PDF becomes a PDF: Word, Excel, PowerPoint, LibreOffice, RTF, HTML, EPUB, FB2, images, TIFF, SVG and even Pages/Numbers/Keynote.

PDF to another format

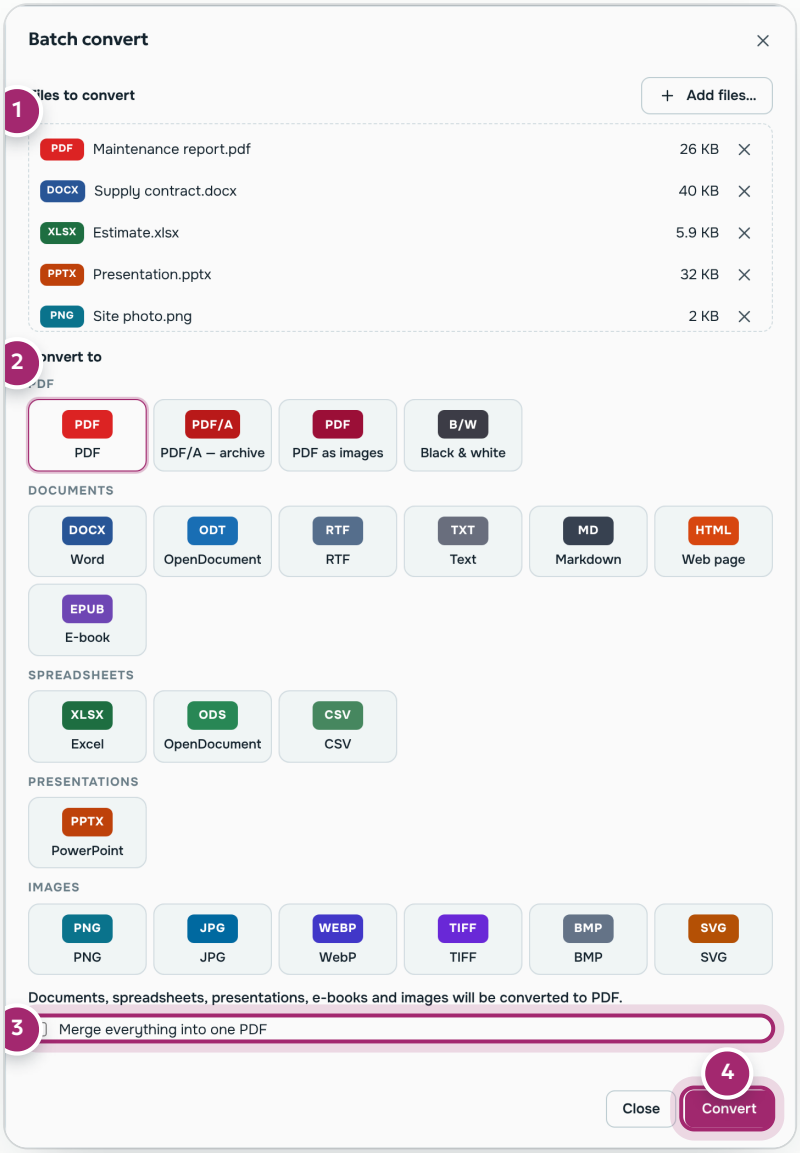

1. **All tools → Convert to any format**, or the arrow by Save → **Save as another format…**
2. Pick a format tile (1).
3. Click the save button (2).

ⓘ Paragraphs, headings, lists, tables and images carry over to Word and Excel. Scans come out as images — run text recognition first.

20 output formats

Word `.docx`	**OpenDocument** `.odt`	**Rich Text** `.rtf`	**Text** `.txt · .md`
HTML `.html`	**EPUB** `.epub`	**Excel** `.xlsx · .ods`	**CSV** `.csv`
PowerPoint `.pptx`	**Images** `png · jpg · webp`	**More images** `tiff · bmp · svg`	**PDF/A** `archival`
Image-only PDF `no text layer`	**Grayscale** `PDF`	**Compressed** `PDF`	**Merged** `PDF`

Many files at once

1. **Convert** on the start screen, or **All tools → Batch convert**.
2. Drop the files — mixed types are fine (1).
3. Choose the target format (2). For PDF you can merge everything into one file (3).
4. Click “Convert” (4). You get one zip archive or a single PDF.

Straight from Windows Explorer

Convert to PDF (SeaVint PDF)

Right-click a document or image — the PDF appears next to the original. On Windows 11 it's under “Show more options” (or Shift + right-click).

Open with

Open any supported file with SeaVint PDF via “Open with” — it becomes an editable PDF you can save.

SHORTCUTS AND FAQ

14 Keyboard shortcuts and FAQ

On a Mac use Cmd instead of Ctrl. Press F1 in the program for the full list.

KEYS	ACTION	KEYS	ACTION
`Ctrl+O`	Open a file	`V · E · T`	Select · Edit text · Add text
`Ctrl+S / Ctrl+Shift+S`	Save / Save as	`H · D · R · N`	Highlight · Draw · Box · Note
`Ctrl+P`	Print	`Delete · Ctrl+D`	Delete · Duplicate object
`Ctrl+Z / Ctrl+Y`	Undo / Redo	`Ctrl+C / Ctrl+V`	Copy / paste object
`Ctrl+F`	Find	`Arrows (+Shift)`	Nudge object
`Ctrl + / - / 0`	Zoom / fit width	`Esc · F1`	Deselect · All shortcuts

FAQ

Where is the file saved?	In SeaVint-PDF.exe, Ctrl+S writes straight into the open file and Ctrl+Shift+S saves a copy. The browser version downloads it to Downloads.
Closed without saving	Work is autosaved. Reopen the program and click “Restore” on the start screen.
Text can't be selected	It's a scan. “All tools → Recognize text”, then you can search, copy and edit it.
Password-protected file	You'll be asked for the password. Remove or change it in “All tools → Password”.
Is internet needed?	No. Everything runs on your computer; files never leave it.
